

The “Chicken-Egg” Problem of AI-BD-HPC Infrastructures

Can't invest big in AI machines unless we forecast good ROI because

“On Premise” machines in clients -

We don't have the experience in running on big machines.

Public Clouds other than the giants -

We are cutthroat.

Large scale supercomputer centers -

Can't sacrifice our existing clients and our machines are full.

Thus the giants dominate, AI technologies, big data, and people stay behind the corporate firewalls...
